

INDIAN ROOFING

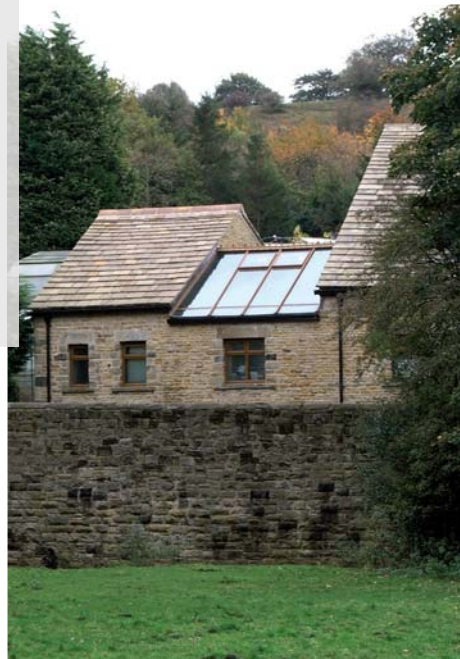

CALIBRATED 22MM

CALIBRATED ROOFING SLATES

are machine cut on the back to provide a uniform thickness throughout. This means your labour costs will be reduced and your builders will be less grumpy! Choose this for a beautifully level and uniform finish.

All roofing slates are cut with an arced top and a pin hole 5cm from the top.

Despite being commonly referred to as 'slates', our roofing is made of natural Indian sandstone. The roofing slates are supplied in the Autumn colour, in varying heights and widths. The natural colour variation allows the stone to blend in sympathetically to any surroundings as with traditional roofing slates. They will weather naturally and beautifully over time.

HEIGHT TO TOP 101.6cm (40")

Width	Area m ²	Linear m	Total Pcs
